

Reliable and Easy to Use Broadcast, Instruct, Monitor and Manage

How to attract students' attention in computer classroom and help them keep focus on learning are the main challenges that teachers face today. Computer boosts learning in the classroom but also brings a huge distraction to students in learning. HiClass SW is the perfect solution to enable teachers and students take advantages of computer and internet and let teachers still in control.

By HiClass comprehensive functions and features, teachers can teach in a happy way and students can learn effectively. HiClass SW is the must-have tools for today's computer classroom.

Quick, Easy Access to All Functions

Floating Toolbar

HiClass SW will be minimized automatically when teacher broadcast and a floating toolbar will popup on the top of the teacher desktop. So teacher can access to all main functions very easily.

Shortcut Menu

Teacher can also use shortcut menu to bring up the HiClass SW teacher console and manage seating plan, file transfer, manage students' request, take a snapshot and more. The shortcut menu is a fast and easy way to access HiClass SW.

Monitor and Provide Assistant

Observe Student

Observer function allows teachers to observe one, selected or all students by a few clicks. So teacher do not have to go around in the classroom to watch students what they are doing. Teacher can also pause on any student, talk to the selected student and help the student by controlling student's keyboard and mouse if necessary.

Thumbnail View

The thumbnail view allows teachers to quickly go over every student's screen from teacher PC. At a glance, it is easy to see which students are on or off task.

Details View

The details view shows columns of information about every student PCs. By sorting on the column, teachers can quickly check student PC properties, running applications, and more.

Snapshot

If you happen to catch a student inappropriately using their computer, click the Snapshot button and a picture of that student's computer screen is created and saved on the teacher hard disk.

One Solution One Software

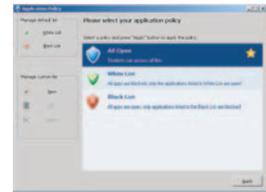

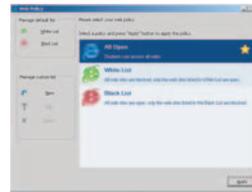

Remove Distractions

Black Screen

At the beginning of class, during a lecture, or just to get the student's attention, Black Screen displays a configurable message while simultaneously locking out the student screens, keyboards and mice. Black Screen is a simple, yet effective feature to keep teachers in control.

Limit Web Sites and Applications

HiClass SW provides teachers, trainers and professors the ability to limit where students can go on the Internet and what applications students can use.

Facilitate Teaching and Learning

Broadcast

With HiClass SW, teachers can broadcast their PC screen to one, selected or all students by a few clicks. Every student monitor displays exactly what the teacher sees in crisp high quality. HiClass SW support two broadcast modes, students will either be locked out of their computers or allowed to re-size the teacher's broadcasted screen at teacher's choice.

Everything Computer Classrooms Need!

Record Screen

Teacher can record his screen operations and use Electronic Pointe to annotate on her screen then save as a file. And these files can be used as teaching material in the learning process. The teacher can playback the recorded file and broadcast to students at the same time.

Net Movie

Teacher can use Net Movie function to send a high quality movie to students. A special design Net Movie player will popup on teacher and all students PC when this function is started, and the playback will be controlled by the teacher. Net Movie now supports movie in many different formats and it will take less bandwidth than Screen Broadcast.

Student Demo

If a student has a creative thinking to a problem or just a pretty picture, select that student and click the Student Demo button. Immediately, all other students in the class will see in real-time that particular student's computer screen.

Remote Control

HiClass SW Remote Control is a quick and easy way to remotely assist a student who needs help. With a single button click you can see the student screen and take control of the student's keyboard and mouse. The teacher can optionally lock out the student or allow him use keyboard and mouse when teachers in control.

Group Activities

HiClass SW Group is a powerful function that allows teachers to group students into different group or put students in pairs for different group activities, collaboration, or even conversation practice. Teachers can also assign different tasks to each group and let each group have different activities to meet different group's learning targets.

File Transfer and Submit

The daunting task of distributing and collecting homework and tests is easy in HiClass SW 5.0. Simply select a file and send it to the students. When it is time to collect the file, students submit the files back to a unique location on the teacher's computer or network drive.

Smart Scroll

The Smart Scroll feature let students view the broadcasted screen from teacher in window mode, and HiClass SW will scroll the window according to teacher's mouse movement and always keep teacher's mouse in center.

Language Learning

Virtual Recorder

HiClass SW is also a good solution for teaching and learning in language lab. Powerful Virtual Recorder functions make the computer lab suitable for language learning as well. Students can follow teacher's lead for the language practice. After the class, students can also bring the class recording home for self-learning.

Group Talk, Pair Talk

By the Group Talk function, teacher can assign students into small group and have conversation practice. This is the basic language learning feature for any language lab.

Communicate and Collaborate

Instant Message

Instant message is the quickest and friendly way to hint a student focus on learning. Once a student knows that the teacher is watching, that is usually enough to keep them focused. Messages can be sent to one, selected or all students in the class.

Intercom

Intercom is a simple and private way for teachers to communicate with students without disrupting the rest of the class.

Answer Student Questions

Many students are embarrassed to raise their hand and would prefer to alert the teacher without other students knowing. With HiClass SW, students can electronically raise their hand by typing in a question to the teacher. The teacher can respond through a Instant Message in private.

Assess Student Progress

Quiz

HiClass SW provide a Quick Quiz for testing or a more sophisticate Quiz builder that can creates true/false, multiple choice and essay questions that can include graphics. When the quiz is sent out to students, the teacher can watch in real-time where and how students are doing on the quiz. Results can be exported to an electronic grade book, significantly reducing the time to administer and grade tests.

Administrate

Seating Plan

Now teachers can create a seating Plan and save it as a file. And also teachers can load different saved seating plan and automatically bring students into the HiClass SW session.

Logoff, Restart, Power On, and Power Off

Turning machines on and off can take 10-20 minutes every day. Get that time back with HiClass SW's Power features. Selected student machines can be powered on, logged off, restarted or shutdown with the click of a button. The Power On feature only work with desktops that support the Intel Wake-On-Lan standard.

Security

Tamper Resistant

Computers in classroom are one of the most hostile computing environments to support. Students are constantly trying to circumvent classroom management solutions. HiClass SW is well designed for school environment and goes to great lengths to keep the system reliably running on student PCs.

Secure Mode

HiClass SW can be configured to require a password to access the teacher console. Student program also can be protected by password to prevent unauthorized setup or even uninstall student program.

Support

Wireless LAN

Wireless carts and tablets are becoming more common in schools across the world. HiClass SW works especially well in wireless environments, carts and on tablet computers because of its efficient use of network resources.

Teacher Use Two Monitor

HiClass SW support teacher PC with 2 monitors, so teacher can use one monitor to manage the classroom and another monitor for teacher's other tasks. This is a great feature to help teachers use HiClass SW more efficiently!

System Requirements

Teacher PC	Pentium III processor , 256 MB of RAM Windows 2000, XP or Windows Vista
Student PC	Pentium III processor ,128 MB of RAM Windows 2000, XP or Windows Vista DirectX 9.0c or higher
Network	IPX/SPX, NetBEUI and TCP/IP, 802.11 wireless is supported, however enterprise class access points are recommended.
